Grant Funding

**1) R01-AR063144-01A1 – 7/1/13-6/30/18 - \$250,000 per year – Role: Co-Investigator
“Targeting removal of aggrecan rich deposits to promote healing of tendinopathies”**

The long-term objective of this project is to advance our understanding of the mechanical (overuse and disuse) and biological mechanisms underlying the pathobiology of tendinopathy. Successful identification of molecular targets in in vivo models will provide the basis for development of novel therapeutic regimes to treat these musculoskeletal diseases.

**2) American Foundation for Surgery of the Hand Young Investigator Grant –
11/1/13-10/31/14 - \$25,000 for one year – Role: PI**

“Epigenetic Markers for ADAMTS5 Functionality in Tendinopathy”

We hypothesize that epigenetic analyses of the methylation pattern of the ADAMTS5 promoter will distinguish normal from tendinopathic tendons in both our novel murine model of tendinopathy and in human epicondylitis.
